

Front-end Star Wars Test

Hello,

We appreciate your interest in Jexia. We're building a platform for developers and we need people like you to make this happen.

For this step, We'd like to present you a challenge. A quick one just to test your abilities.

Do you like Star Wars? We want you to create a catalogue of all the people in Star Wars history, where you can search, filter and look their profile information with:

- Name
- Gender
- Birth year
- Planet they're from
- Whatever more you think is important!

IMPORTANT: we would also like to know who else came from that same planet with links to their own profiles!

It should have at least the follow features:

- Catalogue page with a list of people, with filter and sort options
- Detail page with the basic info and links to people at the same planet
- README file explain how to run, build and serve your project
- Nice UX, where you can use a component lib of your preference

Feel free to use your preferred front-end framework (or vanilla JS), but you will get extra points if it is on Angular (2+)! Last but not least important, you should use the follow api to get the content: <http://swapi.co>

Please try to complete this test within 3 days tops. If you need more time, please let us know. We want to let you as comfortable as possible to solve this test, but keep in mind that 'time vs quality' is one of the inputs being examined here.

And last but not least, have fun doing this test! Fun is an important element creating Software.

We're looking forward to seeing how did you solve this!

Best of luck!

Jexia Front-end team
